ACKNOWLEDGEMENT

First and foremost, we sincerely salute to our esteemed institute **SRI VASAVI ENGINEERING COLLEGE**, for giving us this golden opportunity to fulfill our warm dream to become an engineer. Our sincere gratitude to our project guide **Mr.G.Natraj M.Tech Assistant Professor**, Department of Computer Science and Engineering, for his timely cooperation and valuable suggestions while carrying out this project.

We express our sincere thanks and heart full gratitude to **Dr. D. Jaya Kumari, M.Tech, Ph.d, Professor & Head of the Department** of Computer Science and Engineering, for permitting us to do our project. We express our sincere thanks and heart full gratitude to **Dr. G.V.N.S.R. Ratnakara Rao, Principal**, for providing a favorable environment and supporting us during the development of this project.

Our special thanks to the management and all the teaching and non-teaching staff members, Department of Computer Science and Engineering, for their support and cooperation in various ways during our project work. It is our pleasure to acknowledge the help of all those respected individuals.

We would like to express our gratitude to our parents, friends who helped to complete this project.

INTRODUCTION

Water resources are under pressure from continuing population growth and urbanisation, rapid industrialisation, and expanding and intensifying food production, particularly in developing countries and in urban areas. Urban Populations may nearly double from current 3.4 billion to 6.4 billion by 2050. numbers of people living in slums will rise even faster, with most of the rapid expansion in urbanization taking place not in megacities (21 of the world's 33 megacities are on the coast), but in small and medium sized cities with populations of less than 500 000.

This represents a global threat to human health and wellbeing, with both immediate and long term consequences for efforts to reduce poverty whilst sustaining the integrity of some of our most productive ecosystems. At least 1.8 million children under five year old die every year from water-related diseases. Diarrhoeal diseases make up over four per cent of the global disease burden, 90 percent of which is linked to environmental pollution, a lack of access to safe drinking water and sanitation. Over half of the world's hospital beds are occupied by people suffering from water-related diseases.

AWARENESS ON WATER WASTAGE

1

Check for Leaks

2

Plant a Low Water Garden

3

Harvest Rain Water

4

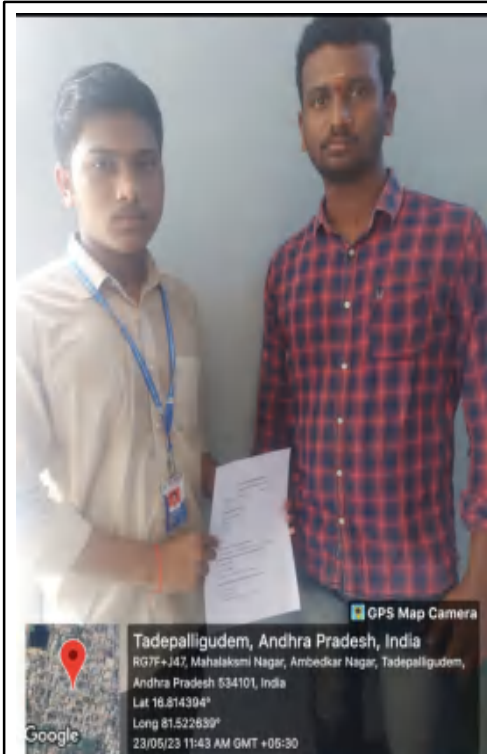

Report Leaks in Your Community

5

Recycle Your Greywater

OBSERVATION

You know, being mindful of water wastage is crucial. It's important to realize that even small actions can make a big difference. Simple things like turning off the tap while brushing your teeth, fixing leaky faucets, and using water-efficient appliances can help conserve water. By raising awareness and practicing water saving habits, we can contribute to a sustainable future for all.

By being conscious of our water usage, we can help alleviate this problem. It's all about making small changes in our daily routines. Taking shorter showers, collecting water for plants, and using recycled water for cleaning are great ways to conserve water. Together, we can make a big impact and ensure that future generations have access to this precious resource. Let's save water and make a difference!

SUGGESTIONS

Here are certain safety tips to avoid water wastage :

- Thrift and mend your clothes.
- Install low-flow fixtures.
- Turn off the tap while washing your face, brushing your teeth and shaving.
- Aerate your lawn.
- Get a rain barrel.
- Fix leaks.
- Don't use more dishes than you need.
- Avoid mid-day plant and lawn watering.
- Shorten your showers.
- Only run your washing machine and dishwasher when full.
- Install water saving shower heads or flow restrictors.
- Don't let the faucet run while you clean vegetables.
- Don't run the hose while washing your car.

CONCLUSION

In conclusion, the awareness of water wastage is crucial for addressing the global water crisis and promoting sustainable water management practices. Through increased awareness, individuals and communities can better understand the importance of conserving water and take necessary actions to minimize wastage. Several key points emerge from this topic:

Water wastage awareness is crucial for addressing the global water crisis. Water is a finite resource, and its scarcity is a growing concern. By understanding the value of water and the consequences of wastage, individuals can make conscious choices to reduce consumption. Education and outreach Programs, along with technology, play a significant role in promoting awareness and facilitating conservation efforts. Businesses and industries should also adopt sustainable practices. In conclusion, increasing awareness of water wastage is essential for sustainable water management.
